

Is Your Furnace Causing Trouble?

Are you wondering if it's time for a replacement...
or does it simply need a repair?

LET'S FIND OUT

Brought to you by your friends at

Just because your heating system isn't working as efficiently as it used to, that doesn't mean you need to replace it.

We have pulled together the most important signs you should evaluate when considering a furnace repair or replacement.

Check the box that most represents your situation.

Rate Your Symptoms

How many of these signs apply to your furnace?

Check the appropriate box for each question to evaluate your heating system.

Take the score from each question and add up the totals - there are 12 questions so the minimum is 12 and the maximum is 60.

If you score more than 30 points, and the repair is more than 10% of the cost of a new system, it is likely time for a replacement unit.

Consult with a heating specialist for a thorough evaluation and recommendation.
